

Monticello Dec. 14. 1813.

I have had the pleasure, my dear Sir, of receiving your letter of Aug. 7.
1812. and with it a copy of your voyages for the observations of the longitudes
at sea, which I have read with great satisfaction, and pray you to accept my
thanks for them. I received at the same time your pamphlet on the Microm-
eter of rock-crystal, the advantages of which you had shewn to me in 1785
at Dr. Franklin's at Pasty, on the telescope you gave him, which is now in
my possession. the uses of this discovery at sea, as well as with land-arma-
ments, are so many and great, that it is wonderful to me, that in a course
of 30. years, it is not yet brought into general use. it is one of the remark-
able proofs of the slowness with which improvements in the arts & sciences advance.

I am happy to learn that you are in the superintendance of the interests
of manufacturers. I shall rejoice to see them flourish every where, & every nation
enabled to furnish itself with what it has hitherto taken from England,
and withdrawing from her their quota of the aliment of her thousand armed
ships, and of her piracies on the ocean, of which they are the instruments.
we shall certainly hereafter call on her for very little. never has there been
an instance of such rapidity in the establishments of manufactures; the
capital of our former commerce being of necessity diverted to that object.
we have already, or shall certainly have in the course of another year,
a million of spindles engaged in spinning; which are sufficient for clothing
our eight millions of people. but they will still continue to multiply. we
are setting the spinning machines into all our farm houses, for the clothing
of our families. I work myself upwards of an hundred spindles merely for
our own domestic use. we raise wool enough for all our purposes; so much
the less being necessary with our abundance of cotton. the race of Merinos
is very much multiplied and spread over all our states from hence North-
wardly. I give you these details because I know your partiality, for

M. l'Abbe Rochon

Rochon l'Abbé. Dec. 14. 13.

The useful arts, and that you will see their importance in all their bearings, political and economical. I am glad to learn that you are shewing us the way to supply ourselves with some of the most necessary tropical productions, and ^{that} the better-rave, which we can all raise, promises to supplant the cane particularly, and to silence the demand for the inhuman species of labour employed in it's culture & manipulation. could you favor me with the details of the best process for the manufacture of sugar from the beet? I have the book of M. Parmentier; but that does not give us recipes of the process. very much gratified by this occasion of recalling myself to your recollection, I tender you the assurance of my great esteem and respect.
