

**COLLECTION
OF
WOODY
SPECIES**

DAWN REDWOOD

The College of William and Mary

PREFACE

Formal documentation of the extensive collection of woody species on our campus has been a task which has been ignored for many years. A search of the archives yielded a single listing of plants prepared by Raymond Taylor who was a member of the faculty from 1931 to 1946. Current information concerning the source and identification of many species and varieties was graciously supplied by Mr. Robert McCartney. We are indebted to him for the completeness of our listings. Assistance was also obtained from Dr. G. Hall, Dr. S. Ware, Mr. M. Clemonds and Mr. E. Farmer. The continuing interest of these individuals made our work a pleasant endeavor.

The enduring botanical influence of Dr. J.T. Baldwin was obvious throughout our investigation. Information dealing with his plantings in certain areas was, however, not available. It is hoped that as a result of the activities of Dr. B. Speese, additional documents will be incorporated into our listings. Pertinent additional information, concerning individual plants or plantings, may be obtained from the publications of J.T. Baldwin and the College archives.

The primary factors which made this study possible were the availability of financial support from the Society of the Alumni and the ability, hard work and determination of Louise Mazingo. We were indeed fortunate to have a concerned Alumni Society that recognized the significance of our efforts and a student with the expertise, who was willing to pursue these sometimes tedious tasks.

We hope that this compendium will serve as a basis for the continued expansion of our collection of woody species and provide encouragement for individuals who wish to supplement our efforts. The college community is fortunate to be able to enjoy a rich botanical heritage and work to insure the preservation of woody species for future generations.

August 1980

The value of this compendium is based on the totality and accuracy of presentation. With this in mind, we began the task of revision and obtained funding from the Board of Visitors, expertise from Heather Jones and assistance from Carlton Swearingen. The identification and location of woody species was time-consuming since there has been a progressive increase in plant diversity. We appreciate the co-operation of those who assisted our documentation. As suggested in August 1980, the collection has expanded to form a significant addition to our campus.

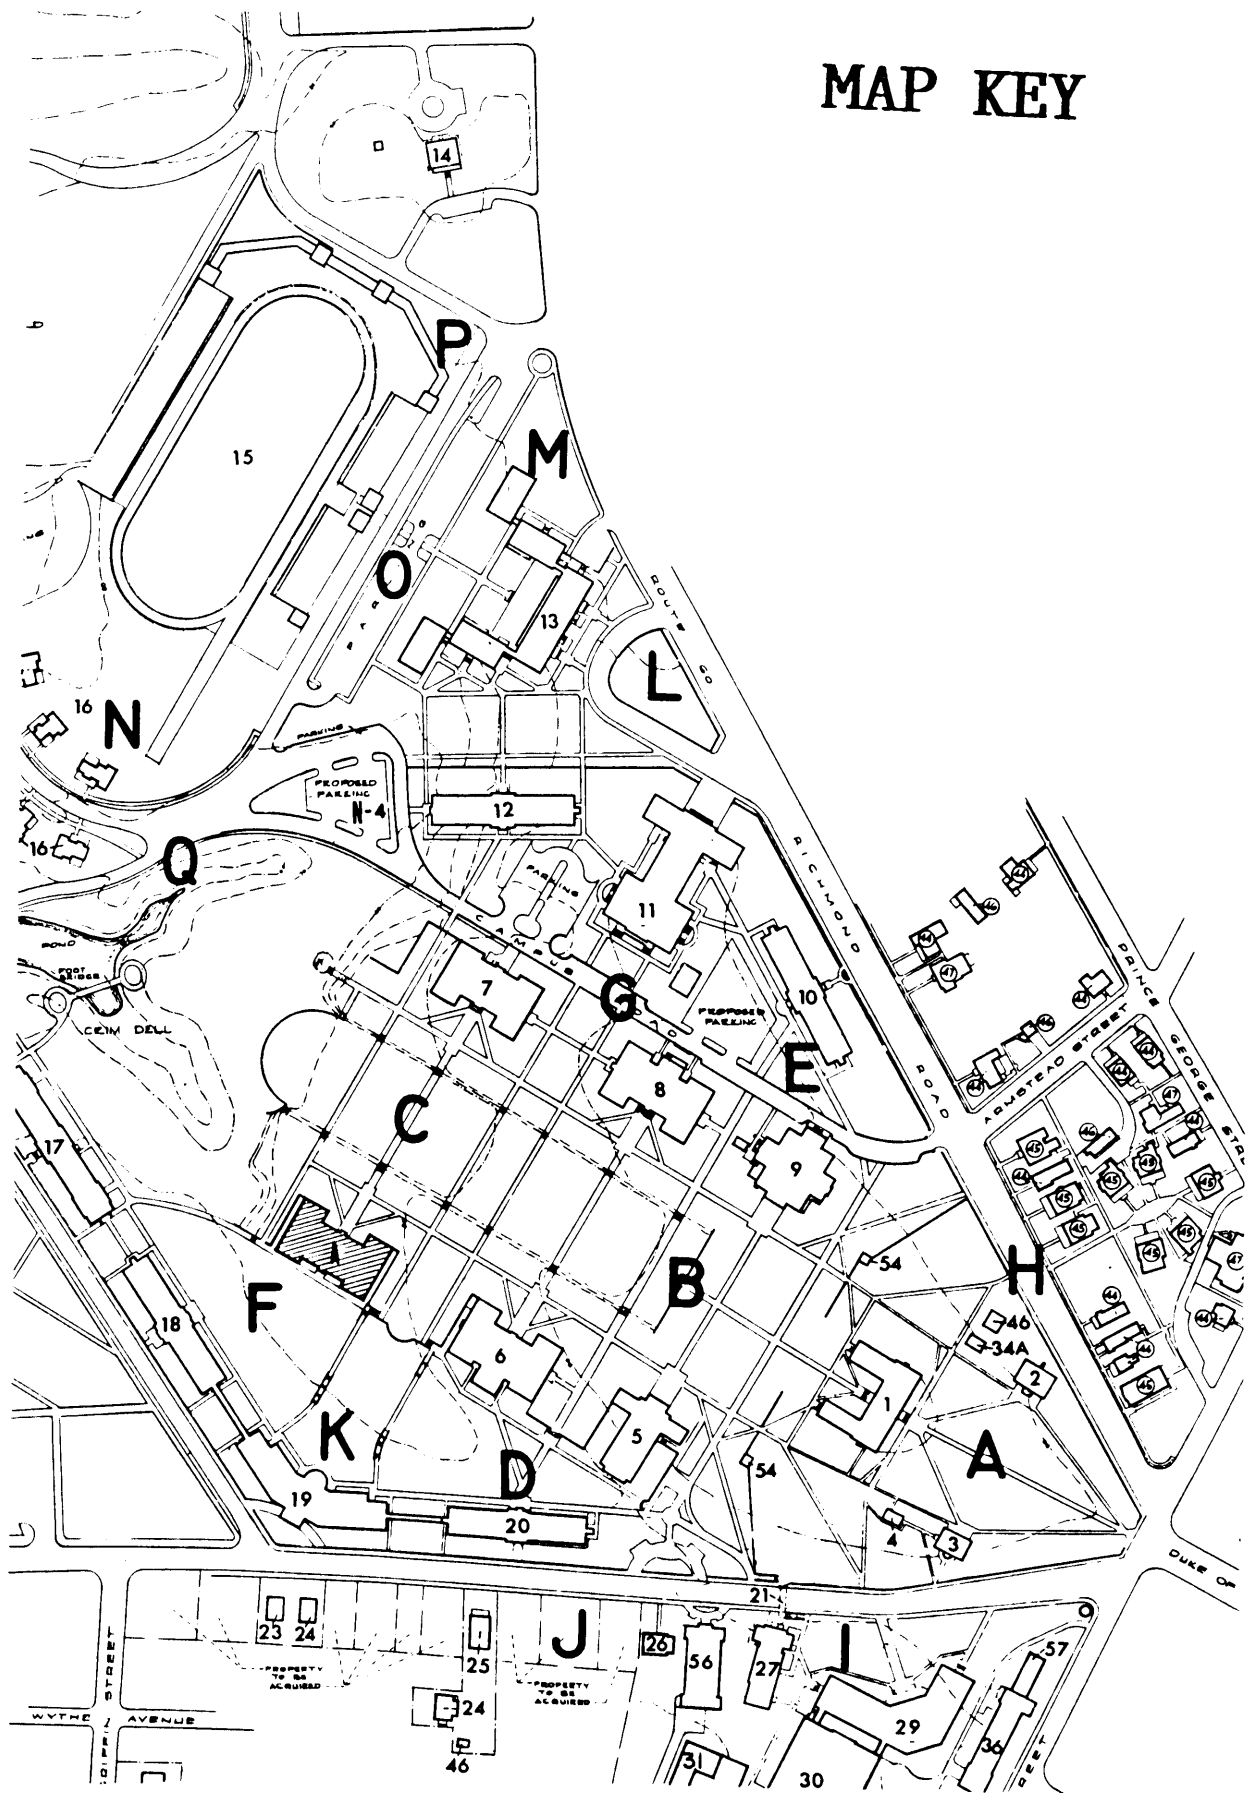

Martin C. Mathes
August 1992

TABLE OF CONTENTS

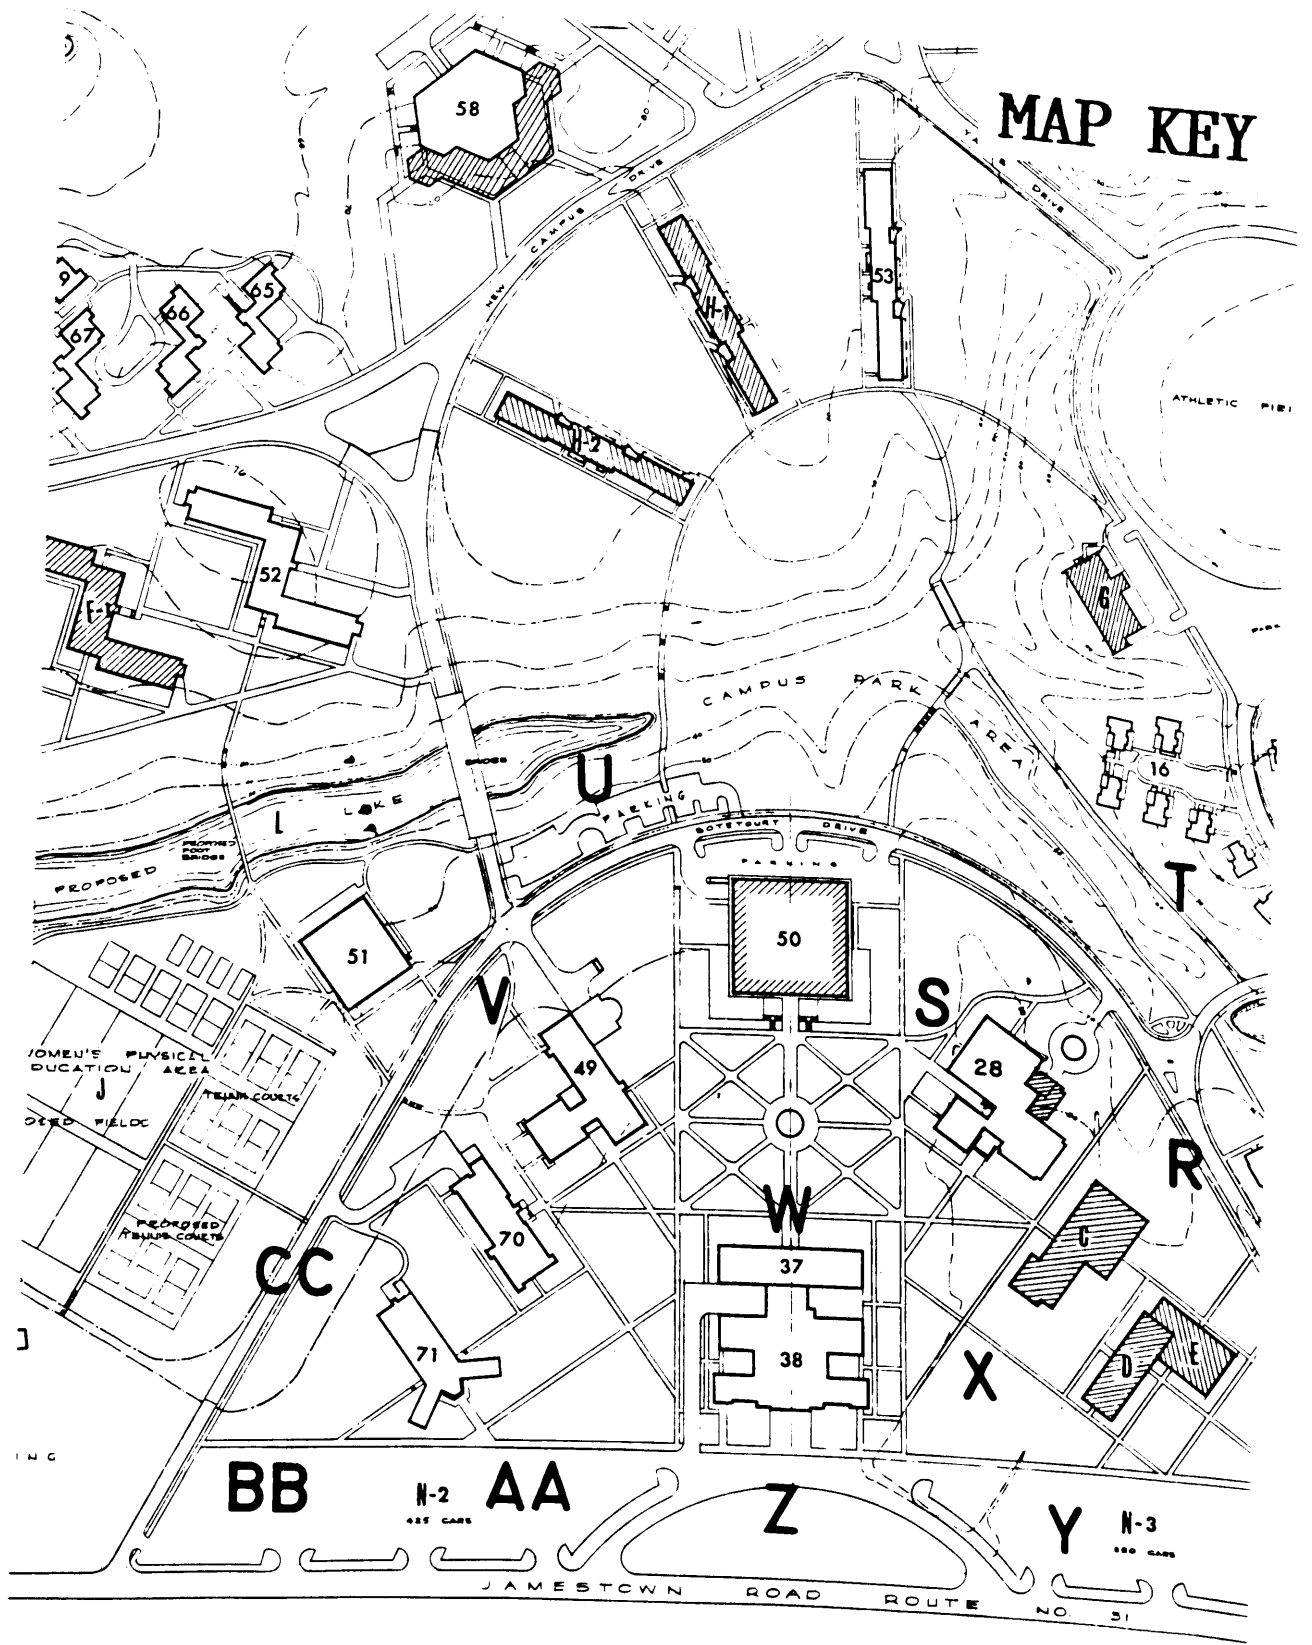

355 species and varieties with
1158 individual plants located
and identified
