PREFACE

Formal documentation of the extensive collection of woody species on our campus has been a task which has been ignored for many years. A search of the archives yielded a single listing of plants prepared by Raymond Taylor who was a member of the faculty from 1931 to 1946. Current information concerning the source and identification of many species and varieties was graciously supplied by Mr. Robert McCartney. We are indebted to him for the completeness of our listings. Assistance was also obtained from Dr. G. Hall, Dr. S. Ware, Mr. M. Clemonds and Mr. E. Farmer. The continuing interest of these individuals made our work a pleasant endeavor.

The enduring botanical influence of Dr. J. T. Baldwin was obvious throughout our investigation. Information dealing with his plantings in certain areas was however, not available. It is hoped that as a result of the activities of Dr. B. Speese, additional documents will be incorporated into our listings. Pertinent additional information, concerning individual plants or plantings, may be obtained from the publications of J. T. Baldwin and the College archives.

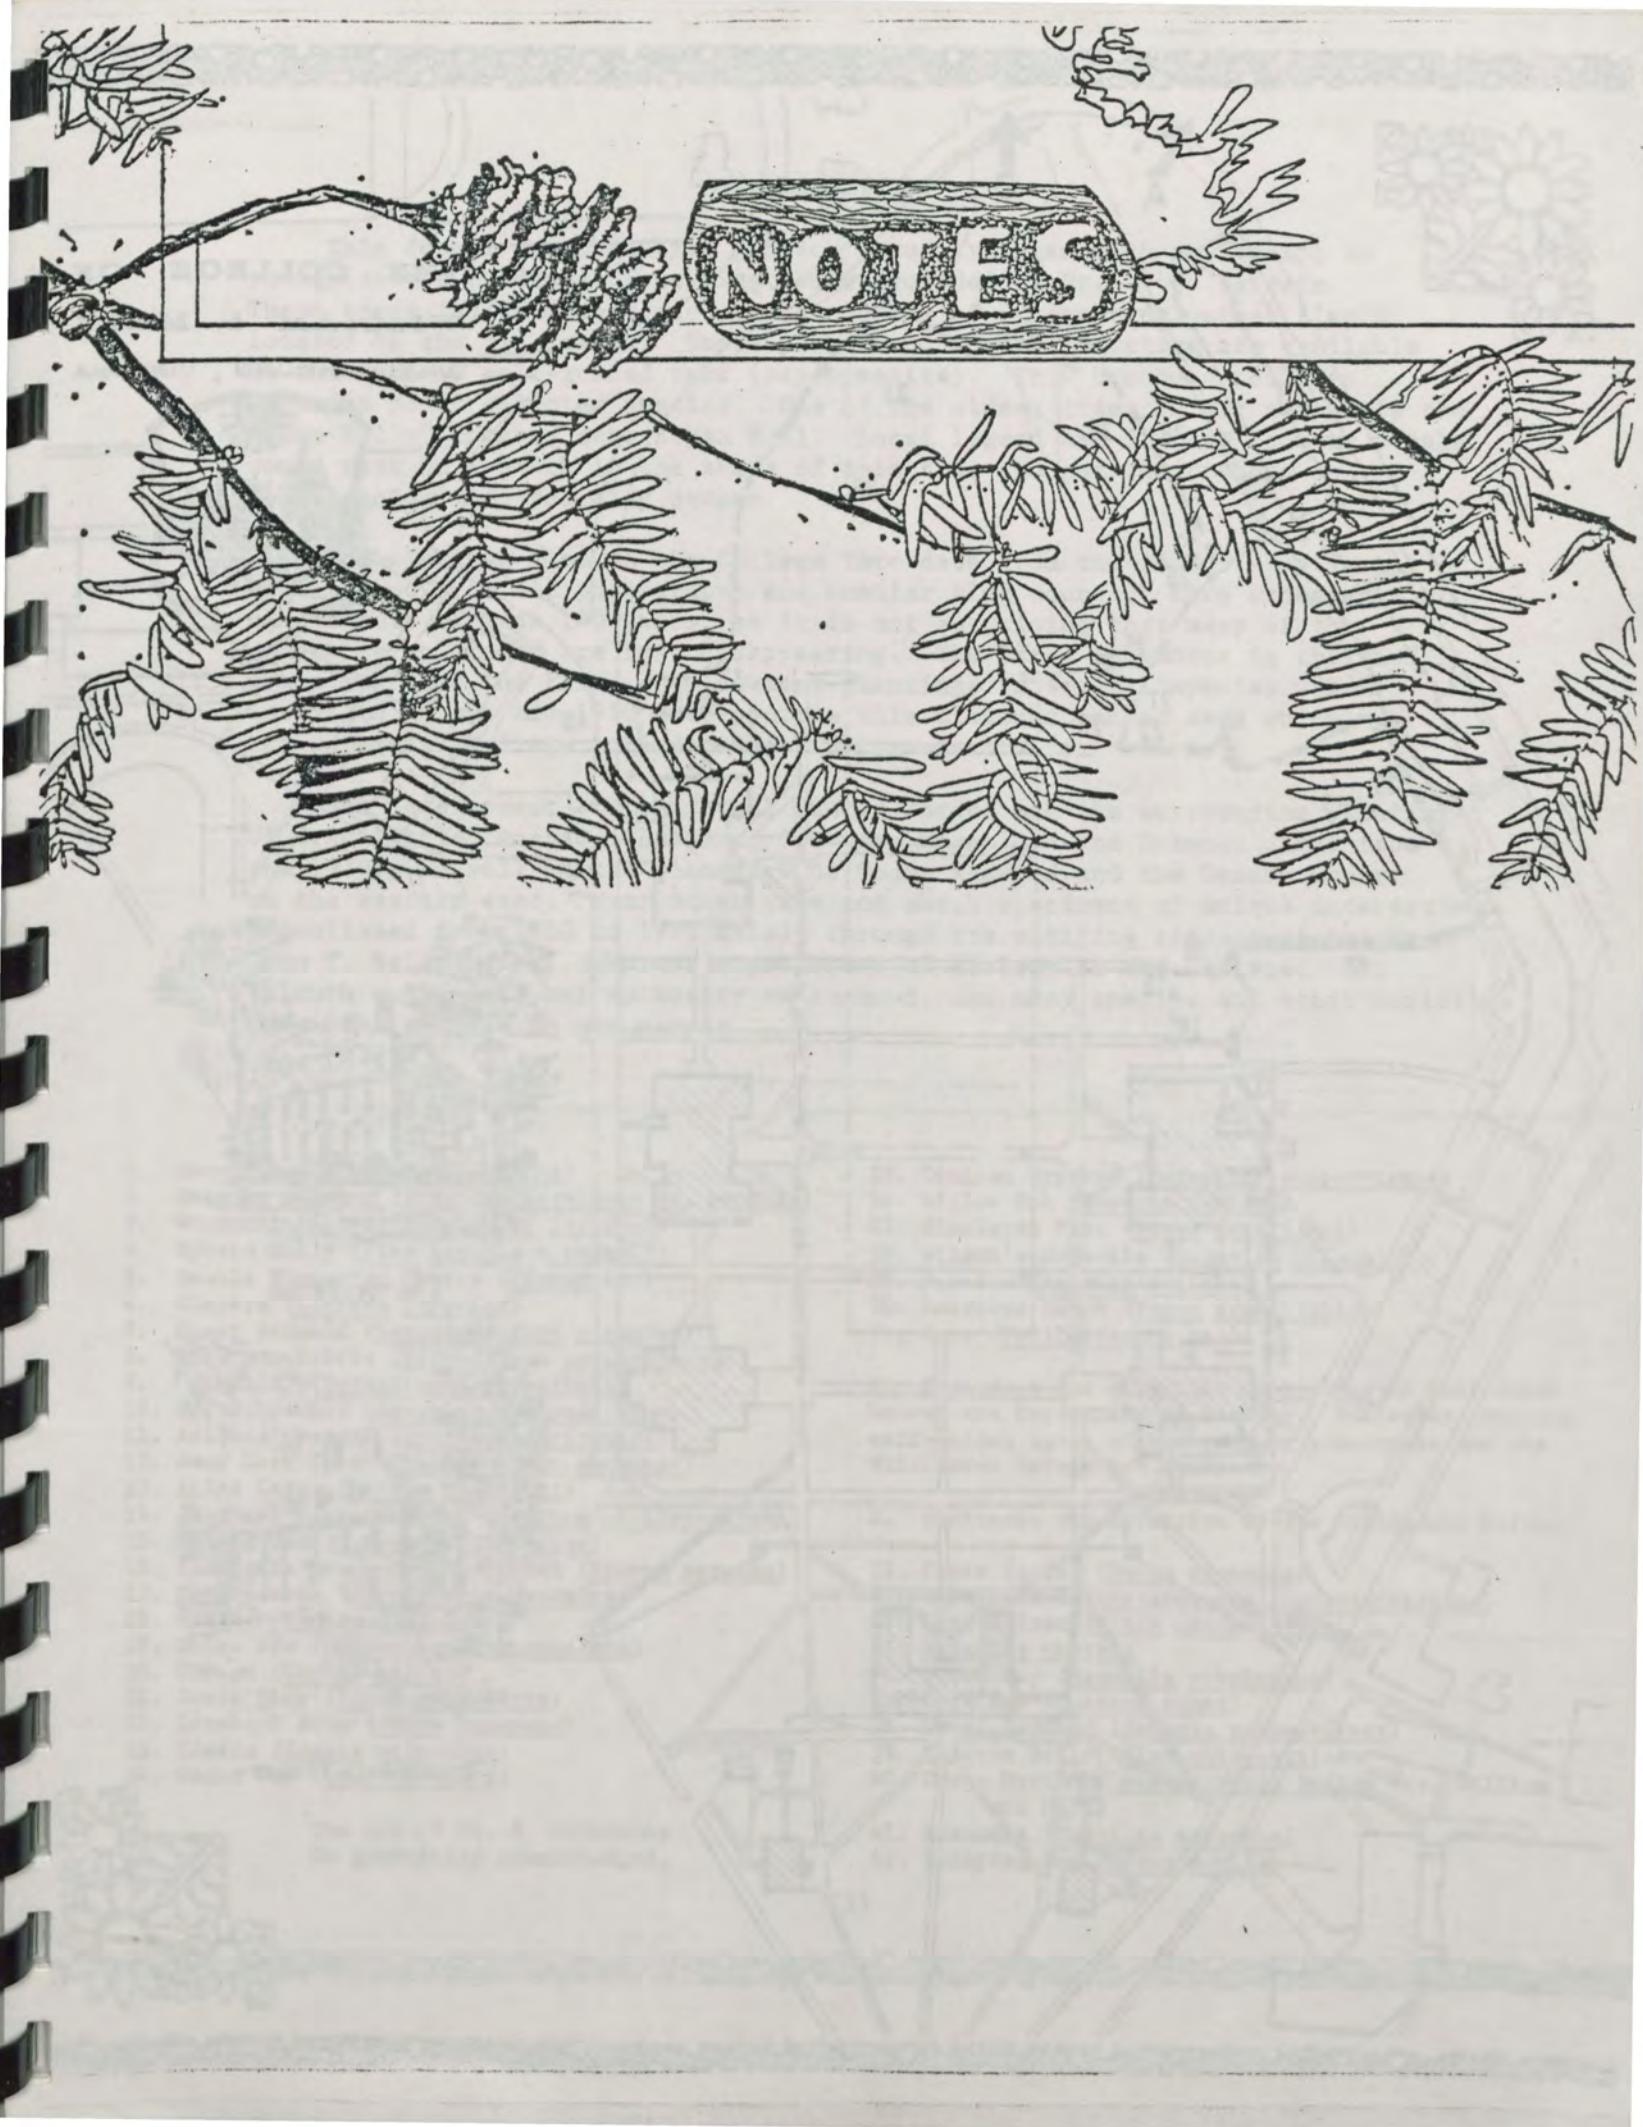

The primary factors which made this study possible were the availability of financial support from the Society of the Alumni and the ability, hard work and determination of Louise Mozingo. We were indeed fortunate to have a concerned Alumni Society that recognized the significance of our efforts and a student with the expertise, who was willing to pursue these sometimes tedious tasks.

We hope that this compendium will serve as a basis for the continued expansion of our collection of woody species and provide encouragement for individuals who wish to supplement our efforts. The college community is fortunate to be able to enjoy a rich botanical heritage and work to insure the preservation of woody species for future generations.

Martin C. Mathes

President's House-

INTRODUCTION

This formal documentation project actually began with an attempt to recognize the hundreds of walking tours provided by Dr. J. T. Baldwin. These tours included antedotes and a nucleus of interesting unique plants located on the old campus. These plants and a short narrative are available in the form of self-guided tour (map opposite). This brochure includes comments about selected species. One of the oldest trees on our campus is the "Shoe-Holly" located near Bryan Hall. Local legend has it that country people would rest on a bench in the shade of this tree and put their shoes on before going into the city proper.

The American Elms in the College Yard date from the 1850's - a fact established from old photographs and annular ring counts. Life expectancy of elms rarely exceeds 100 years; so it is not surprising that many of the venerable specimens are fast disappearing. The large Sycamores in the Yard are older than the Elms. Replacement plantings in several species were installed in the mid-1950's to continue this pleasant shaded area which has witnessed college activities for 375 years.

The development of the formal Sunken Garden and the surrounding plantings of Crapemyrtle, American Beeches, Southern Magnolias and Boxwood dates from the 1930's as well as the plantings of Coast Redwood and the Deodar Cedar on the western end. Many other tree and shrub specimens of unique interest were established from 1950 to 1970 mainly through the untiring efforts of the Dr. John T. Baldwin, Jr., who was a professor of Biology at the College. Dr. Baldwin was a national authority on Boxwood, and many species and their varieties have been planted on the campus

1. American Elm (Ulmus americana)
2. Weeping Boxwood (Buxus sempervirens cv. pendula)
3. Windmill Palm (Trachycarpus fortunei)
4. Hybrid Holly (Ilex cornuta x pernyi)
5. Double Flowering Cherry (Prunus sp.)
6. Cleyera (Cleyera japonica)
7. Giant Redwood (Sequoiadendron gigantea)
8. Viburnum Hybrid (Viburnum x caricephalum)
9. "Cleyera" (Ternstromia gymnathera)
10. Horsechestnut (Aesculus hippocastanum)
11. Arizona Cypress (Cypressus arizonica)
12. Amur Cork Tree (Phellodendron amurense)
13. Atlas Cedar (Cedrus atlantica)
14. Japanese Evergreen Oak (Quercus phillyredoides)
15. Hybrid Oak (Quercus x Comptonae)
16. Fastigate Lorna Baldwin Peach (Prunus persica)
17. Cryptomeria (Cryptomeria japonica)
18. Evodia (Evodia daniellii)
19. China Fir (Cunninghamia lanceolata)
20. Ginkgo (Ginkgo biloba)
21. Scots Pine (Pinus silvestris)
22. Locebank Pine (Pinus bungeana)
23. Idesia (Idesia polycarpa)
24. Water Oak (Quercus nigra)

The aid of Mr. R. McCartney
is gratefully acknowledged.

25. Italian Cypress (Cupressus sempervirens)
26. Willow Oak (Quercus phellos)
27. Himalayan Pine (Pinus griffithii)
28. Wilson's Magnolia (Magnolia wilsonii)
29. Paw-Paw (Asimina triloba)
30. American Beech (Fagus grandifolia)
31. Cane (Phyllostachys sp.)

A. Indicates the direction of Millington Hall which houses the Department of Biology. A display area and self-guided tours of the rooftop greenhouse and the Wildflower Refuge are available.

B. Indicates the direction of the Wildflower Refuge.

32. Poets Laurel (Danae racemosa)
33. Dawn Redwood (Metasequoia glyptostroboides)
34. Chaste Tree (Vitex agnus-castus)
35. Magnolia obovata
36. Sweet Bay (Magnolia virginiana)
37. Cork Oak (Quercus suber)
38. Coast Redwood (Sequoia sempervirens)
39. Chinese Holly (Ilex chinensis)
40. Crepe Myrtle (Lagerstroemia indica var. William and Mary)
41. Sasanqua (Camellia sasanqua)
42. Creeping Fig (Ficus pumila)

The College has also recognized the variety of campus plantings in numerous articles. An excerpt from the William and Mary News (December, 1977) states:

"One of the most spectacular specimens in the College's collection is the Metasequoia, or dawn redwood. Until 1946, it was known to exist only in fossil remains. That year a group of agricultural explorers located a grove of 1000 trees in Szechuan, China. The local peasants were using the trees for the interior furnishings for their homes.

The Arnold Arboretum of Harvard University distributed seeds from the redwood forest to determine where the trees would survive. Baldwin obtained some of the seeds while traveling in Belgium. He had them shipped home and planted on campus. The dawn redwoods at William and Mary are now the tallest in America, towering over 100 feet.

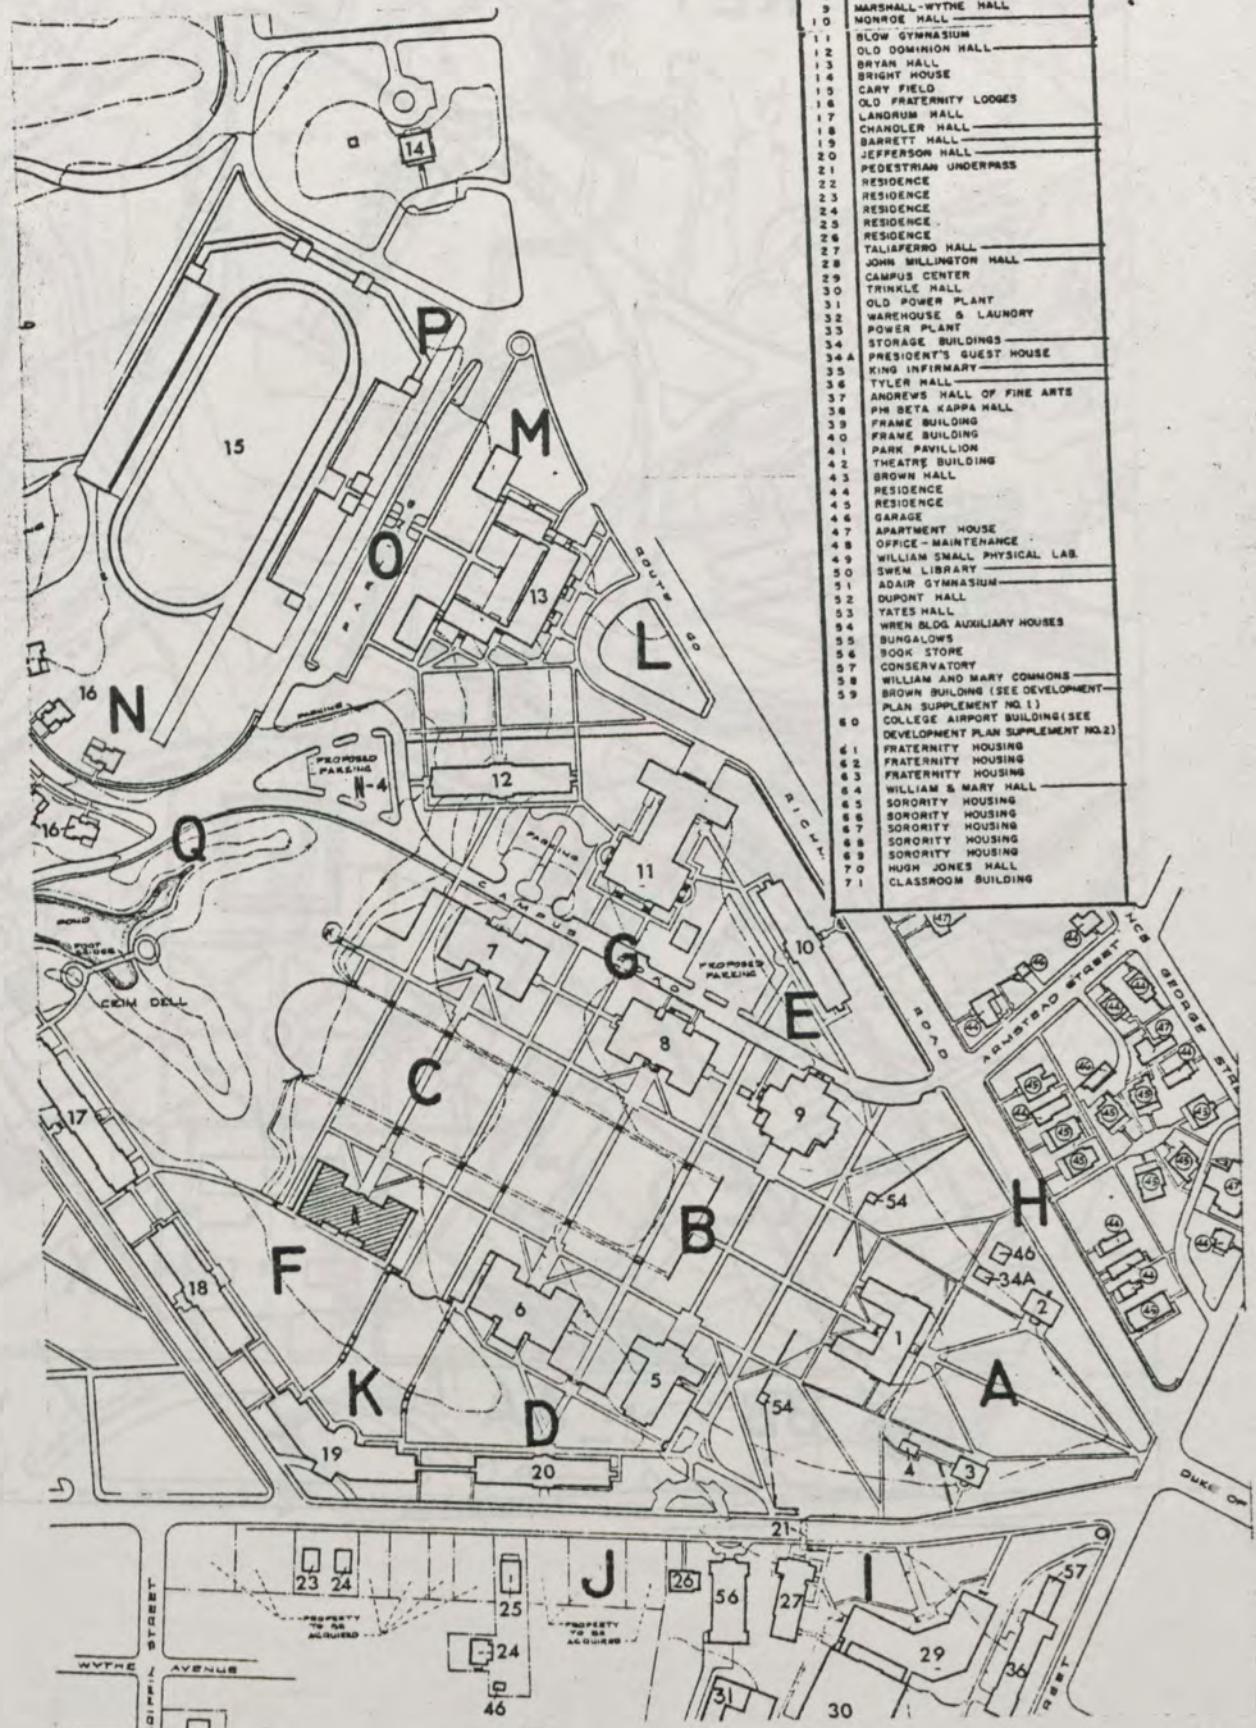

A tree which attracts the admiration of visitors--Christmas tree seekers or not--is the Cryptomeria, a stately evergreen originally from Japan, which was first planted at William and Mary in 1947. The evergreen thrived in the Virginia climate so well, in fact, that Baldwin liked to refer to the Williamsburg area as the cryptomeria capital of the world.

Boxwood was another of Baldwin's interests. In one grove on campus 13 species are included, some of them yet to be officially described and named. His legacies also include a row of hybrid peach trees, a solitary Cork Oak, found naturally only as far north as South Carolina, and a Himalayan Pine with a characteristically twisted trunk.

Baldwin's work is being continued. Professor Bernice M. Speese, who retired from the biology department last summer, still works at William and Mary supervising the care of campus trees and organizing Baldwin's records."

These materials served as an impetus to pursue a complete record of the location and identification of the woody species on our campus "Books are for pleasure and teaching, and so is a collection of plants," Baldwin once said. He believed that an arboretum was just as important to a university as a library, and he planted trees for their instructive value as much as for their beauty.
