

The image shows a full-page view of marbled paper. The pattern consists of repeating, overlapping, teardrop or scale-like shapes. Each shape is filled with a mix of colors: a reddish-brown or terracotta hue at the top, a pale yellow or cream in the middle, and a light blue or cyan at the bottom. The background between these shapes is a mottled, light greyish-blue. The overall effect is a dense, textured, and colorful repeating pattern.

Eclipses, for the Year 1804.

There are Five ECLIPSES this year.

THE first of the Moon, on the 26th of January, in the Evening, partly visible. The Moon will rise 2 digits eclipsed on her south limb at 44 min. after 4. End of the eclipse 5 minutes after 5.
Second, of the SUN, on the 11th of February, at 57 min. after 5 in the morning, invisible.
Third of the MOON, on the 22d of July at 13 min. past 12 P. M. consequently invisible.
Fourth, of the SUN, on the 5th of August, at 47 min. after 10 in the morning, invisible here on account of the Moon's great south latitude.
Fifth, of the SUN, on the 31st of December, at 39 min. past 7 in the evening, invisible.

THE OLD and NEW TESTAMENT DIS-ECTED.

	Old Testament.	New.	Total.
Books	39	27	66
Chapters	929	260	1189
Verſes	23,214	7959	31,173
Words	592,493	181,253	773,692
Letters	2,781,000	838,380	3,566,480

The Apocrypha has 183 chapters, 6081 verſes, 125,18 words. The middle chapter, and the laſt in the Bible, is the 117th Pſalm; the middle verſe is the 8th of the 181 Pſalm; the middle line is the 2d book of Chronicles, 41 chapter, 16th verſe. The word *and* occurs in the Old Teſtament, 85,543: the ſame word occurs in the New Teſtament 10,684 times, the word *Jehovah* occurs 685 times.

Old Teſtament. The middle book of the old Teſtament is Proverbs, the middle chapter is the 29th of Job, the middle verſe is the ſecond book of Chronicles, 20th chapter, 23d verſe: the laſt verſe is the 1ſt book of Chronicles, 1ſt chapter and 1ſt verſe.

New Teſtament. The middle book is Theſſalonians, 2d: the middle chapter is between the 13th and 14th of the Romans; the middle verſe is the 17th of the 17th chapter of the Goſpel by St. John.

The 21ſt verſe of the 7th chapter of Ezra, has all the letters of the Alphabet in it.

The 19th chapter of the 2d book of Kings, and the 37th chapter of Iſaiah are alike.

The book of Eſther has 10 chapters, but neither the words *Lord* or *God* in it.

An Arab, bowed down by the weight of taxes, was unable to maintain himſelf and family. He laid his complaint before the caliph. The caliph was enraged; the Arab was condemned to die. As he went to execution he met an officer eſcorting provisions. "For whom are thoſe provisions?" ſaid the poor condemned wretch. "For the caliph's dogs," replied the officer. "How much better," cried the Arab, "is the condition of a tyrant's dogs than that of his ſubjects."

HELVETIUS.

Political and Moral Reflections.

Mildness of government contributes wonderfully to the increase of mankind. All republics are a convincing proof of this. Nothing invites strangers more than liberty, and opulence which always follows it. The former is courted for its own sake; and the calls of nature attract men to those countries where the latter is to be found.

Men are like plants, that never flourish if they are not well cultivated. Among a miserable people the species not only decreases, but sometimes degenerates also.

MONTESQUIEU.

One of the seven sages of Greece was wont to say, that laws were like cobwebs, where the small flies were caught, and the great break through. LORD BACON.

Could men but know

The blessings which from *Independence* flow,
Could they but have a short and transient gleam
Of *Liberty*, though 'twas but a dream,
They would no more in bondage bend their knee,
But once made freemen, would be always free.
Bred in a cage, far from the feather'd throng,
The bird repays his keeper with his song;
But, if some playful child sets wide the door,
Abroad he flies and thinks of home no more;
With love of *Liberty* begins to burn,
And rather starves than to his cage return.

Hail *Independence!*—tho' thy name's scarce known
Tho' thou, alas! art out of fashion grown,
Tho' all despise thee, I will not despise,
Nor live one moment longer than I prize
Thy presence, and enjoy: by angry Fate
Bow'd down, and almost crush'd, *thou* cam'st, tho' late
Thou cam'st upon me, like a second birth,
And made me know what life was truly worth.

Hail *Independence!*—never may my cot,
Till I forget thee, be by thee forgot.

As ten millions of circles can never make a square, so the united voice of myriads cannot lend the smallest foundation to falsehood—it were to be wished then, that instead of cutting away wretches as useless, before we have tried their utility, and thus converting correction into vengeance, it were to be wished that we tried the restrictive arts of government; and made the law the protector, and not the tyrant of the public. We should then find that creatures, whose souls are held as dross, only wanted the hand of a refiner; we should then find that wretches now stuck up for long tortures, lest luxury should feel a momentary pang, might, if properly treated, serve to sinew the state in times of danger; that, as their faces are like ours, their hearts are so too; that few minds are so base as that perseverance cannot amend; that a man may see his last crime without dying for it; and that very little blood will serve to cement our security.

Goldsmith.

There are a set of men in all the states of Europe who assume from their infancy a pre-eminence independent of their moral character. The attention paid them from the moment of their birth, gives them the idea that they are formed for command; they soon learn to distinguish themselves as a distinct species, and being secure of a certain rank and station, take no pains to make themselves worthy of it. To this institution we owe so many indifferent ministers, ignorant magistrates, and bad generals.

Abbe Raynal.

Princes and lords may flourish or may fade,
A breath can make them as a breath has made;
But a bold peasantry, a nation's pride,
When once destroy'd, can never be supplied.

Goldsmith.

Reason is an emanation of the Deity, and the Supreme Law consists in the harmony between nature and reason. The religion that runs in opposition to these two guides of human life, does not come from heaven.

COMMUNICATION.

A short mode of calculating Interest at 6 per cent, per annum, on Virginia currency—the product to be in dollars and cents—reduce the pounds to shillings cut off the two right hand figures—those on the left will be the answer in dollars, those on the right in cents.

EXAMPLES.

£200 £1875 17 £963 11
 20 20 20

Dolls 400.00 D 375 17 D 192 71
 £13 16 £8 11
 20 20

Dolls. 2 76 Dolls. 1 71

By the above it appears that the interest on a shilling at 6 per cent, is one cent; so that all sums may be ascertained without the trouble of making calculations.—For example, 30s. is 30 cents; 100s. is 100 cents or one dollar. This piece of information may be serviceable to the community: in the hopes and belief that it will be the reason that it is offered to the public in this way.

The Yearly and General Meetings of the people called QUAKERS, are held,

AT Philadelphia, the fourth First day in the ninth month. At Washington, the next First day after the spring meeting in Philadelphia, which is held the fourth First day in the Third month. At Salem, the third First day in the Fifth month. At Wainock and Blackwater, in Virginia, alternately, the third Seventh day in the fifth month. At Westbery, on Long Island, the last First day in the Fifth month. At Little Egg harbour, the first First day in the Sixth month. At Newport, Rhode-Island, the second Sixth day, in the Sixth month. At Baltimore, for Maryland, the second First day in the tenth month. At Sewsbury, the fourth First day in the tenth month. At Newgard and Symons creek, North Carolina, alternately, the fourth Sixth day in the Tenth month.

The following Gentlemen have been successively appointed and acted as Governors of this state, from the commencement of our glorious revolution, to the present period.

Patrick Henry,	Patrick Henry	Robt. Brooke
Thomas Jefferson,	Edmund Randolph,	James Wood
Thomas Nelson,	Beverly Randolph,	James Monroe
Benjamin Harrison,	Henry Lee,	John Page.

Queen, Louisa, Mecklenburg, Montgomery, Matthews,
Nansemond, Northumberland, Campbell, Northampton,
Chesterfield, Stafford, City of Richmond, and Wood—
Second Monday in every month except September, which
is to be held on the first Monday.

Third Monday—Amherst, Culpeper, Dinwiddie, El-
sex, Fairfax, Goochland, Harrison, Lancaster, Prince-
Edward, York, Pittsylvania, Southampton, and Norfolk.

Fourth Monday—Augusta, Brunswick, Bedford, Cum-
berland, Fauquier, Halifax, King William, Loudon,
Middlesex, Borough of Norfolk, Randolph, Orange,
Westmoreland and Fluvanna.

Last Monday—Henry and Accomack.

First Tuesday—Montgomery, Pendleton, Rockbridge,
and Tazewell.

Second Tuesday—Bath, Caroline, Kanawha, Lee,
Prince George, Shenandoah and Wythe.

Third Tuesday—Monroe, Rockingham and Wash-
ington.

Fourth Tuesday—Russell, Brooke, Grayson, and Surry.

Last Tuesday—Greenbrier.

Third Wednesday—Powhatan.

Fourth Wednesday—Hanover.

First Thursday—King George, Nottoway and Suffolk.

Second Thursday—Botetourt, Lunenburg, New-Kent
and Warwick.

Third Thursday—Charles City and Spottsylvania.

Fourth Thursday—Amelia, Elizabeth City, Green-
ville and Madison.

Monday after the third Tuesday—Berkeley.

Monday before the first Tuesday—Frederick.

Monday after the second Tuesday—Hampshire.

Wednesday after the second Tuesday—Hardy.

SONG FOR THE LADIES.

The Maid with her Elbows bare.

LET chasteless-lovers chaunt their lays,
To please the modest, full-dressed fair,
The talk remains for me to praise
The charming maid with elbows bare.

Her ruddy cheek, her sparkling eyes,
Her coral lips, her jetty hair;
Ah, all are charms I highly prize,
But not so much as elbows bare.

The unveil'd bosom, neck of snow,
May tempt the ill-bred clown to stare;
But first-rate beaux, with def'rence bow
Before the maid with elbows bare.

Some ladies show the ankle's shape,
A fashion too not very rare;
Others expose a pretty nape;
But mine's the maid with elbows bare.

Let her, in that loose flowing robe,
Which flaunts and flutters in the air,
Reflect a heart she ne'er will probe,
Unless she leaves her elbows bare.

When winter storms are drear and cold,
And keenly blows the northern air;
When muffs and furs the limbs enfold,
Still trips my maid with elbows bare.

When summer's scorching heats prevail,
And veils shut out the sun's bright glare,
Still, still, my maid will never fail
To go with graceful elbows bare.

In winter, summer, fall or spring,
In weather either foul or fair;
In day or night, thy charms I sing
O my sweet maid with elbows bare.

SIMPER.

SONG FOR THE GENTLEMEN.

Being a Parody on "The Maid with elbows bare."

THE BEAU WITH BREECHES HIGH.

LET tasteless females chaunt their lays,
To please old Fashion's swains so shy;
The task remains for me to praise
The present beau with breeches high.

His dimple cheek, his night grown hair,
His tawny lips, his roving eye,
Such charms I prize I do declare,
But not so much as breeches high.

With waistcoats short,—few girls might see
Something 'twould make their pulses fly;
But first-rate ladies bend the knee
Before the beau with breeches high.

Some fellows shew the haunches shape—
A fashion too, you can't deny;
But huge cravats conceal the nape,
Of ev'ry beau with breeches high.

Let him, in that gay spencer robe,
Which hue resembles næther sky,
Reflect, a heart he ne'er will probe,
Unless he keeps his breeches high.

When winter storms are drear and cold,
And snow and rain from mountains fly;
When vests and cloaks the limbs enfold,
Still struts my beau with breeches high.

When summer's scorching heats prevail,
And sweat thro' ev'ry pore doth fry,
Still, still my beau will never fail
To strut with graceful breeches high.

In winter, summer, fall, or spring;
In weather either wet or dry—
In day or night—the charms I sing
Of my sweet beau with breeches high.

CRENSIK.

A CURIOUS LOVE LETTER.

Madam,

MOST worthy of estimation! After long consideration and much meditation of the great reputation you possess in the nation, I have a strong inclination to become your relation. On your approbation of this declaration, I shall make a preparation to remove my situation to a more convenient station to profess my admiration, and if such oblation is worthy of observation and can obtain commiseration, it will be an aggrandization beyond all calculation, of the joy and exultation

Of Yours,

SANS DISSIMULATION.

SIR,

THE ANSWER.

I perused your oration with much deliberation and a little consternation, at the great insatiation of your weak imagination to shew such veneration, on so slight a foundation. But after examination and serious contemplation, I suppose your animation was the fruit of recreation, or had sprung from ostentation to display your education, by an odd enumeration, or rather multiplication, of words of the same termination, though of great variation, in each respective signification.

Now, without disputation, your laborious application, to so tedious an occupation, deserves commendation, and thinking imitation a sufficient gratification, I am without hesitation,

Yours,

MARY MODERATION.

MAN [says a Boston paper] may be compared to a Book. His birth is the title page, his baptism the epistle dedicatory; his groans and crying, the epistle to the reader, his infancy and childhood, the arguments—contents of the whole ensuing treatise; his life and actions are the subject; his sins and errors the faults escaped; his repentance the correction: as for the volumes some are in folio, some in quarto, some in octavo, and some in duodecimo; some are plain bound, others more elegant: some have piety and godliness for their subject: but

great numbers are mere romances, pamphlets of wantonness and folly; but in the last page of every one there lands a word which is *Finis*, and this is the last word in every book; such is the life of man.

ANECDOTES.

A DISPUTE happening between two Officers on board a vessel, whose crew were a mixture of English & Irish, the Officer, who was partial to the latter country asserted, that the lower class of English did not inherit the quickness of intellect which the Irish possessed; and a bet having taken place upon the subject, it was to be decided by the answer which each countryman gave to a question that was proposed. The question was first proposed to the English sailor, and it was 'what he would take to go up a loft *blind-folded* in a hard gale?' I would take a month's pay,' replied the fellow. 'And you, Paddy,' enquired the Officer, turning to him, 'what would you take?' 'Why my dear Honey,' replied he, 'I would, indeed, take very fast hold!'

When Lieutenant O'Brien, (who was afterwards called Sky Rocket Jack) was blown up in the Edgar, he was saved on the carriage of a gun, and when brought to the Admiral, all black and wet, he said with pleasantry. 'I hope sir, you will excuse my dirty appearance, for I came out of the ship in so great a hurry, that I had not time to shirt myself.'

A person died lately in Manor-street, Dublin, who had always appeared in the dress of a male. This man, however, was found to be a woman—and, what is a little extraordinary, four *bastard children* had been sworn to the deceased as their father.

Not long since, a certain Quack was addressed by one of his patients as follows: "Doctor, how is it that when we eat and drink, the meat is separated from the drink?" "Why, I'll tell you, (replies the Quack,) in the neck there is two pipes, one of them is to receive meat, the

other drink; at the top of these pipes, is a lid or clapper; and when we eat, this clapper shuts up the drink pipe; and when we drink, it turns back upon the meat pipe. But Doctor, (says the patient) *it seems to me that clapper must play down sharp when we eat pudding and milk!*

A poor Arabian of the desert, ignorant, as most Arabians are, was one day asked, how he came to be assured that there was a God. 'In the same way,' replied he, 'that I am able to tell by the print impressed on the sand, whether it was a man or a beast that passed that way.'

Tobacco was first brought into repute in England by Sir Walter Raleigh. By the caution he took of smoking it privately, he did not intend it should be copied.—But sitting one day, in deep meditation, with a pipe in his mouth, he inadvertently called to his man to bring him a tankard of small beer. The fellow, coming into the room, threw all the liquor into his Master's face, and running down stairs, baw'd out "Fire! help! Sir Walter has studied till his head is on fire, and the smoke pursts out of his mouth and nose."

A young lady in France has actually *died* of the long-raging induenza of *naked elbows*—her husband stormed, and physicians advised; but she preferred death to covering her elbows, and determined to *die in fashion*.

A pedant lately entered into a *Tallow Chandelier's* in Whitechapel, and asked for a *penny worth* of candles, in the following sublime sultan—"Pray give me a penny-worth of your *sabacious composition* to illuminate my *obscure cubicle*."

When the great Duke of Aryle was one night at the Theatre in a *hide-box*, a person entered the same box in *boots and spurs*. The Duke arose from his seat, and with ceremony, expressed his thanks to the stranger, who somewhat confused, desired to know for what reason he received those thanks. The Duke gravely replied, "for not bringing your horse into the box."

A person at Dunkirk lately brought an action against a man for *pulling his Nose!* In addition to the insult, the plaintiff complained that his nose was rather too long before.

What is the reason, said one Irishman to the other, that you and your wife are always disagreeing? Because, replied Pat, we are *both of one mind*—she wants to be master and so do I.

From GIBBON.

The recital of the third incident may provoke a smile amidst the horrors of war. Theobald, marquis of Cemejano and Spoleton, supported the rebels of Beneventum, and his wanton cruelty was not incompatible in that age with the character of a hero. His captives of the Greek nation or party, were castrated without mercy, and the outrage was aggravated by a cruel jest, that he wished to present the emperor with a supply of eunuchs, the most precious ornaments of the Byzantine court. The garrison of a castle had been defeated in a sally, and the prisoners were sentenced to the customary operation. But the sacrifice was disturbed by the intrusion of a frantic female, who with bleeding cheeks, dishevelled hair, and importunate clamours, compelled the marquis to listen to her complaint. 'Is it thus,' she cried, 'ye magnanimous heroes, that ye wage war against women, against women who have never injured ye, and whose only arms are the distaff and the loom?' Theobald denied the charge, and protested, that, since the Amazons he had never heard of a female war. 'And, how,' she furiously exclaimed, 'can you attack us more directly, how can you wound us in a more vital part, than by robbing our husbands of what we most dearly cherish, the source of our joys and the hope of our posterity? The plunder of our flocks and herds I have endured without a murmur, but this fatal injury, this irreparable loss subdues my patience, and calls aloud on the justice of heaven and earth.' A general laugh applauded her eloquence; the savage Franks inaccessible to pity, were moved by her ridiculous, yet rational despair; and with the deliverance of the captives he obtained the restitution of her effects. As she returned in triumph to the castle, she was overtaken by a messenger, to enquire, in the name of Theobald, what punishment should be inflicted on her husband, were he again taken in arms; 'Should such,' she answered with-

out hesitation, 'be his guilt and misfortune, he has eyes and a nose, and hands, and feet. These are his own, and these he may deserve to forfeit by his personal offences. But let my lord be pleased to spare what his little handmaid presumes to claim as her peculiar and lawful property.'*

* Should the licentiousness of the tale be questioned, I may exclaim, with poor Sterne, that it is hard if I may not transcribe with caution, what a bishop could write without scruple.

RIGHTS of WOMEN.

A Lady who is a strong advocate for the rights of women, being lately engaged in a dispute with a gentleman, asserted, that an army of women would be in every respect competent to an army of men, adding, 'Suppose I was commander of 10,000 women, each of whom had a military education, and you of 10,000 men, how would you get an advantage that you might not have in an equal degree over an army of men?'—'Madam,' replied he, 'I would keep from a general engagement—I would make propositions of peace and during the treaty the male and female officers and soldiers must frequently meet to settle the conditions, and in eight or nine months, when all of you ought to be in the field, you would be on the straw.'

"My father desired me, Sir, to ax you," said a physical disciple to a certain eminent pharmacopoliſt, "that I might attend you to all your patients, as you know, Sir, it is the last year of my time," "You shall Bob, you shall," replied the master; "Come, get your hat. They entered the sick man's chamber, and the usual circumstances occurred, such as feeling the pulse, *et cetera*; after assuming an appearance of profound thought, the vender of the galenicals told the wife of the sick man, with much gravity, that her husband was in extreme danger and that she had contributed to his malady by giving him oysters. The woman in much confusion, at last owned the fact. When they had quitted the house, Bob enquired with much earnestness of his master how he could possibly know that the patient had eaten oysters. "You

foolish boy," replied the other, "I saw some shells under the bed." The next time Bob went alone, & returned to his master with a ghastly visage, and told him the patient was dead by eating a horse—A horse Bob," rejoined the Esculapian chief, "how do you know that?" "Oh easy enough, Sir. I looked under the bed, and saw a saddle and bridle!"

Elegant description of SPRING.

LIKE a maiden, shy and fearful,
Hidden now by turns, and seen,
Frownest now, and now art cheerful,
Spring, creation's fickle queen.

Winter's wither'd clutches hold thee,
Doting on thy youthful charms;
Summer, longing to unfold thee,
Pulls thee to his ardent arms.

Inscription on a CLOCK

ISERVE thee here with all my might,
To tell the hours by day, by night;
Therefore example take my me,
To serve thy God as I serve thee.

GRIEF and TENDERNESS.

CAN time that wretched bosom cheers,
By pride or passion shook?
Or bathe that heart but with a tear
Despairing love has broke?
Ah, No!—before that cheerless eye
The form of peace retires;
And in that with'ring breast the ray
Of human hope expires.

Directions for Gardening.

From the memorandums of persons experienced in that business, after twenty years practice in the State of Virginia.

JANUARY IN the beginning of this month, if the weather is open, and the ground dry, sow Almon's hotspur peas, hotspur beans, or the long podded bean. In frosty weather break the dead wood out of the strawberries, and get in dung.

FEBRUARY. The first of this month sow Almon's masher, Charlton's hotspur, and marrowfat pease; plant Windsor beans, slip currants and gooseberries. On the day that the moon falls sow onions, and throw in some lettuce and raddish seed with them. In the decrease of the moon sow carrots, parsnips, and spinnage; sow parsley, celery, garden cresses, white mustard, green and red beets, cabbage, and colewarts. In the middle of this month plant out cabbage and colewarts. The last week plant the slips of the large box.

MARCH. Now sow all kinds of pease and seeds, plant broad French beans, set out cabbages and colewarts the slips of raspberries, currants, and gooseberries, thyme, sage, balm, winter savory, hyssop, featherfew, wormwood, potmarjoram, mint, lavender, tansy, fullendine, and rosemary, after a rain; plant cucumber seed, and muskmelons. Set out asparagus as follow: Dig a trench as wide as you intend your beds shall be, and two feet deep, lay a layer of oyster shells six inches thick over the bottom, ram them well, cover the shells two inches thick with horse dung, then lay on as much mould, and continue to do so till the bed is finished. This done, take asparagus roots raised from seed, and set them in rows a foot wide: You may plant the seed at the distance above directed, which some think better than setting roots.—Remember not to cut your asparagus till the 4th spring. Dress them well every November, as directed.—See Nov.

APRIL. The first of this month sow your last crop of pease, plant French beans, middle dig your artichokes

and slip them, leaving two or three of the strongest on every hill; sow cabbage, colewarts, lettuce, radish, cresses, and white mustard; plant out cabbages and colewarts; sow colliflowers and brocoli. Plant French beans once a week throughout this month and all the subsequent ones, till you expect the frost will destroy your crop. If the weather is favorable, plant Lima beans.— I would advise two or three plantings of this kind at the interval of six or seven days; they are good to put into hominy in winter, instead of the hominy bean. You should, if you have room in your garden, have two squares for artichokes, one square prepared against you slip, into which set the slips at four feet distance; if the season proves dry water every evening. This plantation will produce fine artichokes the second or third year, and perhaps longer. When they bear plentifully, you may dig up your former square (which will be fine for cabbages, or any other produce) and set out a new one, always remembering to make the ground very rich. Do not suffer many artichokes to run to seed for that injures the plants very much.

MAY. Sow colliflower and brocoli, and all kinds of cabbage, plant another crop of Lima beans.

JUNE. Plant cucumbers and broad beans; plant musk-melons and cucumbers in your plant patch for pickles. After a good season plant out strawberries towards the last of the month.

JULY. The first week in this month plant out cabbages; plant celery in trenches, water it if it is dry, and cover it at all events. About the middle of this month plant out colliflowers three feet and an half distance, in very rich ground. Sow pease the last of this month; I think the latter sort best.

AUGUST. Sow onion seeds the first of this month with radish and lettuce; sow colewarts, garden cresses and white mustard.

SEPTEMBER. The first of this month sow colliflower, cabbage and radish. After the full moon sow spinage. The last of this month take your colliflowers up

and plant them in beds to stand till November; this prevents their flowering.

OCTOBER. Dung your ground in order to plant cabbages. Set them in beds to prevent the waters standing. Dress your borders.

NOVEMBER. Lay up the earth to your artichokes and fill the space between with horse dung and long litter. Plant out your colliflowers as follows: Prepare your ground as for a hot bed, then dig a trench spade deep and two feet wide, make holes at a convenient distance, set five plants in each hole, put your glasses on, raise them on the south side when it is warm; transplant them in the first week in March. Cut your asparagus close to the ground, cover the beds with horse dung, then throw the earth of the alleys over the dung, fork them up in March, and fill the alleys again from the beds: It is a good way to burn the haum which prevents the seed of the asparagus and grass coming up in the spring. Prepare a sloping bed with a south exposure, let it be rich mould, plant small lettuce in rows about nine inches distant, before the severe frosts set in; lay long dung between the rows, and over that dry brush, let them lie in this manner till they begin to spread in the spring, then carefully mix the dung between the rows with earth with your hands; still keep them covered with the brush till the frosts are over. This lettuce will be fit for use before any sown after Christmas; choose small plants.

DECEMBER. The first of this month take up your carrots, cut the tops off, and put them into hole: When the frost has bit your parsnips dispose of them in the same manner. If the weather be open about the 20th of this month, sow Almon's hotspur pease, when they come up earth them up to the top, but do not cover them.

A DIRECTION.

The last of September or first of October take up your colliflowers, with as much earth to the root as you can, dig a trench eighteen inches wide and as many

deep, put in rotten dung, then lay your plants with their heads to the sun. cover them with mould up to the leaves, and add to this a coat of saw dust, when apprehensive of hard frosts cover them well with straw, but remember to let them have as much sun as possible.

The Domestic Physician.

CURE FOR THE FLUX.

Extract of a letter from a gentleman in Philadelphia, to the Editor of the (N. York) Mercantile Advertiser.

PHILADELPHIA, July 30, 1803.

"I HAVE seen in some of the newspapers an account of the deaths in New York, from the 30th ult. to the 27th inst. 23 deaths out of 50 are of the Flux. I suppose most of that number were children. Feeling as I do the anxiety which must prevail with parents whose tender offspring are more especially victims to this terrible calamity, I cannot hesitate to communicate the means I have found effectual in two striking instances in my own family. My son C—— was so extremely ill that he lay on the bed with *blood* and *stools* running from him, and he could not have survived under such a debilitating state twenty-four hours longer. We gave him glisters of Flaxseed boiled in water every hour, and by a few repetitions brought him to proper stools. The prescription being to discontinue the glisters, or the frequency of them, according to the appearance of natural stools. His drink, hartshorn boiled in water and mixed with milk. Food, rice well boiled, until perfectly soft, and sweetened with loaf sugar. He was restored in twelve hours so far as to play about the room. How wonderful a change!

"I was at New York when my son T—— was taken down. On my return home I found him almost gone. He had an eminent physician giving him every possible attention, yet I have no doubt but a few days more would have totally exhausted him. I gave two glisters of the

flaxseed, which perfectly restored his bowels, and he had only his weakness to overcome. In one weak he was able to accompany me in the stage to New York. The flaxseed being boiled in water becomes a muciliginous substance coats the intestines, and takes away the acrimony, and consequently the *tenesmus* is removed. I have stated facts; and under the idea that, should you make it public, the lives of many children will be saved and probably some parents."

Receipt for a COLD.

By the late Dr. James Madome, of London.

Take a large tea-spoonful of linseed with two-penny worth of stick liquorice, and a quarter of a pound of sun raisins. Put them into two quarts of soft water; and then add to it a quarter of a pound of brown sugar-candy powder, a table-spoonful of white-wine vinegar, or lemon juice.

Note, the vinegar is to be added only to that quantity, you are going immediately to take; for if it be put into the whole, it is liable, in a little time, to grow flat.— Drink half pint at going to bed; and take a little, when the cough is troublesome.

This receipt generally cures the worst of colds, in one or two days; and, if taken in time, may be said to be almost an infallible remedy. It is a sovereign balsamic cordial for the lungs, without the opening qualities which endanger fresh colds, in going out. It has been known to cure colds which have almost been settled into *consumptions*, in less than three weeks.

Medical Remarks.

There is nothing better against head-achs, or a heavy dullness of the head, than bathing one's feet in warm water, when going to bed.

The chief sign of a stone in the kidneys, is a fixed pain in that region, with a continual vomiting: all the other signs are uncertain, and common to the other parts of the abdomen.

Ipecacuanha is an excellent specific, one grain taken every night in any thing, for a dysentery, or the flux albus, and for the asthma.

Cholic pains abates almost always in a warm bath; therefore have recourse to the bath, though but mere warm water, when the pain is obstinate.

The belly-ach occasioned sometimes by going bare-footed, is quickly cured by applying hot bricks to the soles of the feet; for the pain in the belly decreases as the heat in the feet increases.

Powder of Orange-peel, half a dram for a dose, is a specific for a quarter ague.

Use no purgatives, volatiles, or any violent medicines at the beginning of a fever, they only inflame the illness.

Avoid all bleeding in malignant fevers, for it sinks the spirits, and causes the blood to coagulate the more. Vomits are good in malignant fevers, especially at the beginning; while wine vinegar and vegetable acids are excellent, when used discreetly.

The most obstinate head-achs, which were almost next to distraction, have been cured, when all other remedies failed, by one dram of the powder of Deguttel, given in tea, or broth, impregnated with cowslip flowers. A loaf of rye-bread, split open, and clapped upon the head as hot out of the oven as can be born, will give ease in the most inveterate head-ach.

A slow fever, with a troublesome short cough at nights, a dry skin, and pale face, is a sign of little impotations in the lungs, in such cases, though the bark would be proper for the fever, it would be bad for the lungs, and render them still more obstructed. In such incipient obstructions, Dr. Russel recommends drinking salt water.

A caustic applied to the legs cures the *gutta seracca*; is exceeding good for athmas, and other diseases of the breast.

In pleurifies, the sooner the patient begins to spit the better; cold drink given in this disorder kills a great many, though frequently ascribed to something else. A looseness in the plurisy generally proves fatal.

Sal prunella, and sal nitre, are specifics for pleurites and all ardent fevers; as sal of tartar, or wormwood, is in cold slyz blood, with low pulse and little discernable fever.

The jesuits bark is an excellent remedy for agues, regular intermittents, and even remittents; likewise for all relaxations of the solids that require astringents: but in pleurifies, and all inflammatory fevers, and impostumations, it is pernicious, often producing an inflammation where there was none before.

There are four stages in fevers; the beginning, the increase, the duration, and the declension. As many days as one stage continues, just so many will each of the others; and if in the beginning the fever proves malignant and violent, or favorable; so will the other stages be: whence a diligent examination of the beginning of the disease the only prognostics of the duration, or even of the fever can be taken.

Vinegar, plain or diluted with water, has been experienced a powerful antidote to the effects of arsenic in recent cases, chiefly by producing speedy and abundant mionition.

A cure for the bite of Poisonous Reptiles.

A Physician of New-England has lately made a curious discovery, which may throw some light upon the means of curing the bites of poisonous reptiles, &c. That when a rattle-snake bites the nose of a dog, the latter digs a hole in the ground, and, by laying the part affected in it, is commonly cured.

A receipt for the Ague and Fever.

Take half ounce of bark, twenty grains of salts of wormwood, and thirty grains of snake root, to be mixed with Madeira wine, and taken three or four times every day, till the malady is removed.

TO FARMERS.

A discovery of considerable importance has been announced, with regard to the preservation of corn. To preserve rye, and secure it from insects and rats, nothing

more is necessary than not to winnow it after it is threshed, and to flow it in the granaries mixed with the chaff. In this state it has been kept for more than three years, without experiencing the smallest alteration, and even without the necessity of being turned, to preserve it from humidity and fermentation. Rats and mice may be prevented from entering the barn, by putting some wild vine or hedge plants upon the heaps; the smell of this wood is so offensive to these animals, that they will not approach it. The experiment has not been made with wheat and other kind of grain, but they may probably be preserved in the chaff with equal advantage. (*L. Pa*)

An effectual method of removing the taste of Garlic, or Wild Onion from milk.

When the milk is new from the cow, pour one quart of boiling water into every gallon of milk; stir it thro' and put the whole into broad shallow dishes, so that it will not be above two inches deep. Let these dishes be placed on an open shelf, that the vapour may pass freely and entirely away. When the milk has stood in this manner twelve hours, it may be put in the churn altogether, or only the cream, as may be most agreeable to the taste or practice of the operator. Milk from cows that have pastured on garlic, (or wild onion,) when managed in this way, will be quite sweet.

To FARMERS. Pieces of rags, dipt in train-oil and bruised gun-powder, and hung up on hedges, or poles will effectually protect newly sown corn from the depredations of birds.

Detached Sentences.

A wise man will desire no more than what he may get; justly, use soberly, distribute cheerfully, and live upon contentedly.

A contented mind, and a good conscience, will make a man happy in all conditions. He knows not how to fear, who dares to die.

Reflections on a GRAVE YARD.

Here is the last stage of life's journey:—Here is the collecting rendezvous of suffering mortals:—Here is a safe retreat from the barbed shafts of malice, from pointed perils, and misery's rod; here, after noble and ignominious views; after every ardent wish; after perusing every flattering object, we find the issue of them all. Here, from servile bondage, and oppression's iron hand, rests the wretched man, whom chance had made a slave; here he forgets his galling state, and with the lordly tyrant sleeps equally accommodated. Here the oppressor and the injured moulder together. Here sleep the meanly saving and the riotous profuse. Here, prostrate in the dust, lay the degraded relics of soaring mortals! Remember then the transient visions of terrestrial greatness; and act so as to be prepared to pay the momentary loan of Heaven's great lender.

Richmond Post-Office.

During the summer establishment, the Northern Mail will arrive at this place every day, Sundays excepted, at half past 12 o'clock, P. M. and leave it the next morning, half after 9 o'clock. All letters sent by half after 8 o'clock will be made up for that mail. The Southern Mail every morning, Sundays excepted, at 9 o'clock in the morning, and leaves this place the same day at 1 o'clock P. M. All letters sent by 12 o'clock will be made up for that mail. The Eastern Mail at 6 o'clock, P. M. on Mondays, Wednesdays and Fridays. All letters sent one quarter before 9 o'clock, will be made up for that mail. The Staunton Mail, every Monday at 6 o'clock in the morning, and leaves this place the next Wednesday at noon. The Tappahannock Mail every Wednesday at 9 o'clock in the morning, and leaves this place the same day at noon. The Lynchburg Mail every Wednesday at 9 o'clock in the morning, and leaves it the same day, at 2 o'clock P. M.

We had rather be miserable and appear happy, than be happy and appear miserable.

INTERESTING TABLE.

In Blodget's statistical table for 1802, we have the following Scale of population and resources of the United States for that year.

Property of the United States.

Specie		2,000,000
4,500 lots in Washington	} 470,000,000	
235,000,000 acres of land		
at 2 per acre,		

The properties of Oak Leaves.

From the chemical experiments of the Reverend. Mr. Swayne, Oak Leaves are found to produce, of astringent matter, nearly the quantity produced from the bark; (that is, half a peck of leaves produces nearly as much as a pound of bark, when properly dried.)

We think it worthy the attention of Tanners to make the experiment; for, could it supersede the necessity of the use of bark, it would prevent the sacrifice of so much of this valuable timber, which is yearly felled merely for the sake of supplying Tanners with that article.

N. B. These leaves may be made use of for hot-beds.

It is vain for Man to think that he can hide any thing from God, who sees and knows all things.

JUST PUBLISHED,

And Sold by JOHN DIXON and JOHN COURTNEY, Jun.

A NEW COLLECTION OF

Hymns and Spiritual Songs,

[Containing 304 pages.]

THE Hymns are selected from the most approved authors, and adapted to the different modes of Divine Worship. The Spiritual Songs contained in our late publication are comprised in this; also, a number entirely NEW, together with some selected from pamphlets lately published in North and South Carolina and Baltimore. Revised and corrected by the Rev. JOHN COURTNEY, of the City of Richmond. Purchasers will find the price of this book much lower than any work of the kind heretofore published. An allowance made to those who buy to sell again.

Richmond, Sept. 30th, 1803.

All kinds of Printing,

Executed with NEATNESS, ACCURACY, and DISPATCH:—Orders from the Country will be duly attended to.
